What to Expect with AcellFX

What is human amniotic membrane?

AcellFX is made from human amniotic membrane, which surrounds the baby and provides protection during pregnancy. Donors are rigorously screened for viral and infectious diseases.

The amniotic membrane is obtained and processed according to standards and/or regulations established by the American Association of Tissue Banks (AATB) and U.S. Food and Drug Administration (FDA).

Although this tissue has been tested and screened for human pathogens, and processed under aseptic conditions, human-derived tissue may still transmit infectious agents.

Why AcellFX?

Your eye needs help returning to a more healthy state. AcellFX helps your eye surface repair itself. AcellFX is quick and easy for your doctor to place on your eye. This amniotic membrane is tiny and comfortable.

Understanding AcellFX

AcellFX is made from human amniotic membrane that is donated by healthy, consenting mothers giving birth through scheduled C-sections (Cesarean deliveries).

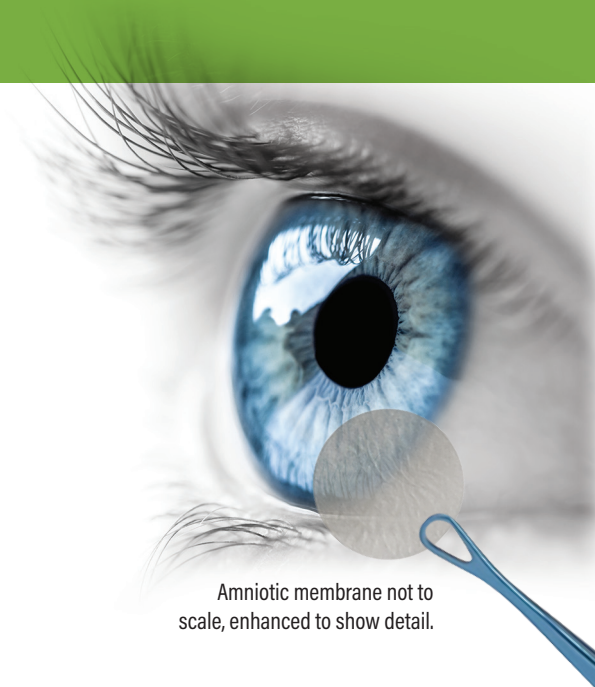

Doctors use amniotic membranes like AcellFX because they can help your eyes get better in a simple, healthy, and comfortable way.

AcellFX is a tiny, almost see-through tissue that is placed on the eye to help repair your eye's surface.

AcellFX does not have to be removed. It is a natural tissue that should be absorbed by your eye.

Amniotic membrane not to scale, enhanced to show detail.

How does AcellFX work?

This tiny membrane protects your eye as your eye surface repairs itself back to a healthy state. Your doctor will place it on your eye at your office visit. Your eye should have healthy absorption of AcellFX.
