

What is AcellFX?

AcellFX is a tiny, thin, almost see-through tissue that helps repair your eye's surface.

What is human amniotic membrane?

AcellFX is made from human amniotic membrane that is donated by healthy, consenting mothers giving birth through scheduled C-sections (Cesarean deliveries). Donors are rigorously screened for various viral and infectious diseases.

The amniotic membrane is obtained and processed according to standards and/or regulations established by the American Association of Tissue Banks (AATB) and U.S. Food and Drug Administration (FDA).

What does my doctor think?

Your doctor's number one priority is providing the best care for your eyes. Doctors use amniotic membranes like AcellFX because they help your eyes get better in a simple, natural, and comfortable way. Doctors have been using amniotic membranes to help repair eyes for over 70 years.²
